Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

BOTH LANDING GEAR COLLAPSED. RIGHT LEADING EDGE WING
DAMAGED. Plexiglass windshield & Doors broken, Fuselage Dents,

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

During normal landing procedure using Runway 36, Right traffic pattern, downwind leg approximately 1/4 mile, which is to close, out from the landing runway, and at 1200 AGL Feet traffic pattern altitude maintained until abeam the approach end of the landing runway. Then at this time, power was reduced 1500 rpm and descent begun. Base leg was initiated approx. 45 degrees from the approach end of the runway, then during a poorly planned and executed base to final approach with steep Bank 45° degrees turn, uncoordinated turn was made which right wing tend to drop rapidly ~~radially~~ rapidly causing the airplane to roll in that direction and excessive loss of altitude; at the prompt action power added and wings level to prevent a completely stalled condition or spin be avoided but was too late and is the result of overshooting the centerline of the runway.
