

I flight checked the plane, taxied to Runway 18. Was going to do a nose up take off, started down the runway and pulled the nose up at about 20 mph and at about 40 mph left the runway. It started to veer to the left, I give it right rudd and right Aleron. It hit the runway ~~and the~~ on the right wheel and bounced up. It was flying along the bank and I give it right Aleron and rudder the right strut hit the ground and flipped the plane over.
