Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

TORN SKIN ON UNDERSIDE OF LEFT LOWER WING AND AILERON

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

While making a three point touch and go the aircraft landed on center line in a slightly tail high attitude. lowering the tail caused the aircraft to become airborne. I was the pilot at the controls, kept the bounce to within about a foot off the ground while maintaining centerline and keeping the aircraft pointed straight down the runway. I maintained the 3 point attitude and guided the aircraft back to the runway in a 3 point attitude on center line and pointed straight down the runway. I brought the nose of the aircraft ^{down} to a take-off/wheel landing attitude maintaining good control of the aircraft as we continued the landing roll-out. at that point the aircraft veered sharply right. the left wing came down and the lower left wing came in contact with the ground. the contact seemed to stop the ground loop and the aircraft returned to an upright position and stopped.

I contacted the tower, explained what had happened and requested permission to taxi to visitor parking at the base of the tower. the taxi was completed and the aircraft shut down.

No one was injured and no other property was damaged.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I believe that there are two likely causes of the initial swerve - either I the pilot ~~at~~ the controls accidentally hit the right brake while controlling the landing roll-out or a wind gust hit the aircraft just prior to the tail wheel being lowered to the ground.

If the former was the cause then I need to pay more attention to my foot positioning on the pedals.

If the latter, that was bad luck, the gust would have hit at the least controllable moment in the landing rollout. Getting the tail wheel down more quickly might have helped.
