Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Aircraft encountered a prop strike during landing in Park Rapids, MN. The prop stike was not discovered until the student returned to Grand Forks. Upon further investigation by maintenance, it was also determined that the firewall was bent and there was a small crack on the tail cone.					
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>					
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.					
The student pilot left for her first solo cross-country on the morning of 12/2/2017. She departed her home base of Grand Forks, ND(GFK) at around 0800 am CST with a direct route of flight to Park Rapids, MN(PKD). Upon arriving at PKD, she entered a straight in for runway 18. She approached the runway fast and instead of conducting a go-around, she attempted to land which resulted in a porpoise. The aircraft porpoised about 5 times before she was able to conduct a go-around. Through an internal review board with the student, we identified that she failed to properly identify that she was high and fast. This resulted in a nose low landing on touch down which led to the subsequent porpoise. She didn't know she struck the prop and returned to PKD to conduct another landing(because she didn't think the first one counted for her solo). Her second landing when fine. She then departed PKD and flew to Thief River Falls, MN(TVF). She conducted a straight in for 31 in TVF followed by a departure back to GFK where she concluded her cross-country flight. She did not notice the prop damage or firewall damage on post-flight. The crew that was assigned the aircraft next identified the damage to the propeller. The aircraft was written up with a discrepancy. UND's maintenance department looked over the aircraft on 12/13/17. Upon removing the cowl, they identified the bent firewall along with a small crack on the tail cone. At this point, the FAA and NTSB were contacted regarding the incident.					

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

UND Aerospace is constantly training student pilots. LOC and Recovery from Faulty Approaches to Land continue to be one of our hot safety topics with our students. We have and will continue to stress the importance of making sound decisions during the landing phase of flight. We continually educate our students and CFIs to go-around when something feels abnormal on final. It is better to come back for a second try after a go-around rather than force the aircraft on the ground from an unstable approach. This is always easier said than done, as many students and CFIs think they can save a landing. UND Aerospace will continue to keep this as a highly emphasized area with our flight crews.

As for this specific scenario - the student is required to complete the following:

Review the following UND Aerocast videos

Normal Landing - <https://www.youtube.com/watch?v=S1fCohTldGY>

Faulty Approach to Land - <https://www.youtube.com/watch?v=USkb9y10twc>

Conduct a review brief of decision making followed by a flight in the crosswind trainer.

Review flight(s) as needed in the aircraft to regain proficiency to reattempt solo landings in Grand Forks
