Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Prop strike with snow bank, spinner damage from ground contact and both wingtips damaged from striking snow bank.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Purpose of Flight:

The purpose of this flight was to take advantage of a period of good weather to practice a few touch and goes in order to maintain recently acquired skills. The entire flight was to be carried out in the traffic pattern of KGKJ and was only to last approximately 30 minutes.

Preflight Observations:

The weather was very good VFR with a clear sky and a variable wind reported between 4 and 5 knots. The wind, when not reported as variable, was from 130 degrees. The wind report and the wind sock favored runway 7 for departure. The runway was mostly clear with a few spots of snow that had been scraped smooth by the plow. The runway was also wet in places and appeared to have salt or de-icing granules in areas. A thorough preflight inspection of the airplane was completed according to the checklist and no abnormalities were noted.

Flight:

I departed on runway 7 and climbed to pattern altitude of 2400 feet msl. I flew the pattern and completed my pre-landing checklist on the down wind leg. As I turned final I was in my landing configuration with flaps down, airspeed at 80 mph and approximately 500 f/m decent rate. I verified that I was on the glide slope with a red over white indication from the VASI system. I was maintaining the centerline by using a little crosswind correction due to a crosswind out of the south.

As I approached my aiming point I executed my transition to level flight and pulled the power back. I was holding my crosswind correction, bleeding off airspeed and applying back elevator pressure as I began to sink for touchdown. To this point I was experiencing a normal landing. At the moment of touchdown I experienced a strong gust of wind from the right to the left. That gust pushed my airplane laterally across the runway (the nose was still pointing down the runway) causing me to impact the snow bank piled along the left edge of the runway from the snowplowing operations. When my landing gear entered the snow bank the airplane pivoted counter clockwise causing the right wingtip to contact the snow bank. The airplane then pivoted clockwise as it moved over the snowbank causing the left wingtip to impact the snow bank and then nosed down on the back side of the snow bank causing the ground contact with the spinner. The airplane then continued the clockwise pivot and came to final rest with the nose of the airplane pointing south perpendicular to the runway.
