

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Carson City State: Nevada

ZIP: 89706 Country: USA

Latitude: 39.1956751 Longitude: -119.7394022

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 02/11/2018 Local Time: 12:40pm
mm/dd/yyyy

Time Zone: Pacific

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N76478

Manufacturer: OLIVER LAWRENCE R

Model: KITFOX IV 1200

Serial Number: DCU021

Year of Manufacture: 1995

Amateur-Built: ☒ Yes ☐ No If Yes: ☒ Kit/Plans ☐ Original Design Make: Kitfox/Skystar

- ☐ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 1200 lbs

Weight at Time of Accident/Incident: 1140 lbs

Number of Seats: 2 Flight Crew Seats: 2

Cabin Crew Seats: 0 Passenger Seats: 0

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
☐ Balloon
☐ Blimp/Dirigible
☐ Glider
☐ Gyroplane
☐ Helicopter
☐ Powered Lift
☐ Rocket
☐ Ultralight
☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☒ Normal
☐ Aerobatic
☐ Balloon
☐ Commuter
☐ Transport
☐ Utility

Special

- ☐ Restricted
☐ Limited
☐ Provisional
☐ Special Flight
☒ Experimental
☒ Special Light-Sport
☒ Experimental Light-Sport

- ☐ Certificate of Authorization or Waiver (COA)
☐ None ☐ Unknown

Landing Gear

(Check all that apply)

☐ Retractable

- ☐ Tricycle ☒ Tailwheel
☐ Amphibian ☐ High Skid
☐ Emergency Float ☐ Skid
☐ Float ☐ Ski
☐ Hull ☐ Ski/Wheel
☐ Other Launch/Recovery System
☐ None ☐ Unknown

Engine Type (Select one)

- ☒ Reciprocating ☐ Liquid Rocket
☐ Turbo Shaft ☐ Solid Rocket
☐ Turbo Prop ☐ Hybrid Rocket
☐ Turbo Jet ☐ None
☐ Turbo Fan ☐ Unknown
☐ Electric

Fuel System Type (Reciprocating)

- ☒ Carburetor ☐ Fuel-Injected

Engine	Engine Manufacturer	Engine Model/Series	Manufacturer's Serial Number	Date of Mfg. mm/dd/yyyy	Rated Power ☒ Horsepower or ☐ lbs of Thrust	Total Time (hours)	Time Since: Inspection (hours)	Overhaul (hours)

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Both landing gear collapsed, left wing damaged substantially, fuselage structure is damaged at wing and landing gear attachment points, propeller destroyed, engine damage is unknown.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

N76478 Accident on 2/11/2018

On the morning of 02/11/18, I checked the forecast and present winds for Carson City, Nevada, several times with Fore-flight and Weather-bug. Winds were calm but forecast to increase greatly in the afternoon. At about 10:00am, I rolled the airplane out of my garage, at 119 Julie Way, Dayton NV, and loaded it on to my purpose built trailer, and secured the plane to the trailer. Before I left my house with the plane, at about 10:50 am, I called the Carson AWOS to check the winds, which were reported calm. I then towed the plane, on the trailer to the gas station near my house and put 5 gallons of fuel in it. The plane already had 5 gallons in it that I had put in it several days before. Between the gas station and the Carson Airport, I called the AWOS and it again reported calm winds. I arrived at the airport at about 11:30am, and before unloading the plane, I again called AWOS and it reported about 6 kts, which seemed to me to be ok to unload the plane. As I was unloading the plane, near Sterling Aviation, CFI Larry Lindenberg SR, arrived and helped me unload the plane and swing the wings into flying position.

I performed the preflight check lists, including checking fuel sumps for water. I got into the left seat, Larry got into the right seat, I started the engine, tuned the radio and intercom, completed the Pre-taxi check list and listened to AWOS. I think winds were 140@9kts and then set the altimeter to field elevation, which matched the altimeter setting of about 29.77 that AWOS reported. I told Larry that I would be glad if he ended lesson at any time, even if we just taxied around, as the winds were forecast for increase. Larry and I agreed that the winds favored RWY 9. I made a call on the CTAF that we were taxiing to RWY 9 and then, with me at the controls, we taxied. As we got to RWY 9, that wind sock was definitely favoring RWY 27. Larry and I agreed that we would use RWY 27, so I turned around in the run up area, made a CTAF call, and taxied to RWY 27. We got to the RWY 27 run up area, and that wind sock also favored 27. There was another plane doing a run up there, so we were parked to the left of that plane. I performed the run up and Pre-Takeoff checklist. The run-up was good. We then briefed on take-off check list, Rotation, Vx and Vy speeds and the take off process. Larry emphasized that when landing, if it did not look and feel good, we would perform a go-around. He also explained to me and showed me what he expected when he said "I have the controls", by visibly moving my hands off the joystick. He said we would stay in the pattern. I asked him about who would be in control on takeoff, and he said I would be in control, with him on the controls with me. I took another look at the wind sock, which appeared to be about 10-15Kts at about 230 deg, asked Larry if the wind was OK, and indicated he thought it was good.

At about 12:30pm, I made a CTAF call that we would be taking off RWY 27, staying in the pattern, and I taxied into position on RWY 27, made another scan of the instrument and added full power. The takeoff roll was a little wobbly at first, do to my over use to the rudder. We took off, climbed out at about 65mph, turned left cross wind, then down wind, still climbing to pattern altitude. Larry said that we would make this a low pass on RWY 27 so I could get a feel for the plane and any cross wind correction needed. I made a left turn to base and final and made CTAF call we were on final RWY 27 Low pass. I had over shot the RWY, but we had a long final, so I took a good correction angle and Larry cautioned me not to over rudder the plane to get back to the runway. We were a little high and fast, about 75 mph, on final, so Larry told me to go to idle throttle and slow down my airspeed. On short final, the airspeed was down to about 65mph and the approach angle was good, but I was having trouble getting aligned with the runway, mostly I think because of a cross wind. At that point, Larry took over the controls, adding some power, and getting the plane back over the runway. We crossed the threshold at about 50 feet agl and mostly level. Somewhere before mid-field, I asked Larry if we were going to do a go-around. He said he was going to try to get wheels on the ground for a second. A little past mid-field, the plane finally stabilized and Larry set the up wind wheel on the run way about centerline. We rolled straight on the runway on a few seconds. Then the plane was quickly picked up about 10 feet, apparently by a wind gust, and turned about 30 deg. to right, and pushed off the right of the runway. I think I called out 50mph to Larry, and he was attempting to regain control. A couple of seconds later, I think I called 40 mph, and could see that the wheels were at the tops of the sagebrush. I asked Larry "are we going in" he said "yes". I grabbed the roof structure, with my left hand and closed my eyes. A couple of seconds later, the plane stopped moving, I opened my eyes and could see fuel leaking out of the left wing tank vent. I shut of the fuel valve. Larry and I asked each other if we were OK and we both reply we were. Larry unlatched his door and climbed out and I followed him out the right door.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

More caution with wind. Better flight instructor selection by student pilot.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

I do not know if the ELT activated. Someone else at the accident scene removed the ELT from its mount, turned it OFF, and then placed it back in the baggage area of the plane.

The ELT was not necessary to locate the aircraft because there was a witness of the ground, at the airport.

I do not know the specifics of Larry Lindenberg's Logbook, endorsements or medical.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE**Date of this Report**02/15/2018
