Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

the propeler bent on one side nose gear broke, the rudder was bent as well.
no property damage on the ground.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

on the way from lawrance to westport at 6500ft i noticed a drop in rpm and the propeller was spinning with partial power, I checked the fuel shot off valve it was open looked at the gas gages it showed around half tank on the right and a quarter on the left tank, I have had filled with gas to the top before I left, carb heat was off the mixture was in, everything looked good except the engine stopped, I pulled the gas not all the way in order to restart the engine, it didn't work the first two times, the third attempt for restart it did start and quickly quite again, at that point I dialed 7700 and made my Mayday Call on 121.5 things happened really fast as I had maintained the glide speed and trimmed the airplane down as much as I could, then I realized that the ground was coming fast as I also was looking for the best spot to put down the plane without crashing it into something, I remember looking at the altimeter on touchdown it was around the 1000 msl, I wanted to preform a soft field landing, but with out engine... I wasn't fast on touchdown though. After the fact I released my self from the seatbelt and released my (I had tightened his good before landing) made sure he's good then went back to the plane, switched the fuel valve to the off position and turned the electrics and master switch off grabbed my stuff and stained away while called 911.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I'm not sure, but maybe pulling the carb heat would have helped me restarting the engine perhaps.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
