NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On the 12 February 2018 my crew and I were catching and collaring Elk for the state of Utah. At the time of the accident I was piloting my Helicopter a MD500D from the front left seat. My net gunner was sitting behind me in the back left seat. Just the two of us on board. We had already netted an Elk cow who was running with a net on her, we needed to place a second net on her in order to catch and immobilize her.

The Elk was running on the side of a hill with a gentle slope. I approached with her below me against the slope and on my left hand side, so the net gunner could place a net on her. As we started to fly by her, my net gunner fired the net over the Elk which was approximately below and opposite my door. My attention immediately focused forward as I had a small rise in terrain approaching. I started to flare, to pull the nose up for the terrain as well as to slow the helicopter down to come around and drop my net gunner off so he could restrain the Elk. I suddenly felt the helicopter begin to shake and started to spin. I realized we were going to crash so I tried to keep the helicopter level and snapped the throttle off to stop the spin. It all happened so fast but as the ground came I tried to cushion the impact.

The helicopter hit the ground and the right hand gear broke on impact as we now faced the complete opposite direction. As the helicopter was now tilted to the right against the slope, the blades were impacting the ground. I closed the throttle from flight idle to off to shut the engine down, pulled the fuel mixture to stop the flow of fuel, mashed the SOS button on the spider tracks, our flight following device, then turned the master switch off and pulled the rotor brake to stop the blades.

I turned to my net gunner and asked if he was Ok, which he confirmed he was. We both exited the helicopter. My net gunner ran over to the Elk lying on the ground about 25 yards away with the net on her. I walked over and he proceeded to tell me that the Elk directly after being netted, turned down slope and lunged off the slope straight into the path of the tail rotor, striking the tail rotor, which caused the crash.

As the Elk was still alive with a deep gash across her back, we euthanized the Elk.

Contrary to the bad media reporting. Neither myself nor my net gunner received any injuries whatsoever, not a single bruise or scratch.
