The airplane flipped on its back. Bent wing and tail. Bent prop. Broken windshield.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 16 of February, 2018 I scheduled an IFR training flight with my CFII. I checked TAFs for my home based KBJC airport and some surrounding airports. The forecasts were showing that at about 2 AM local time winds will increase above 18 kts gusting 25 kts. Until then it showed calm and occasional rise to 10-12 kts. Well with in my margins. We agreed that I will fly to KLMO from KBJC to pick up my CFII. I departed KBJC at around 1820 and landed at KLMO at around 1845. Picked up my instructor and I took off for practice. We were flying around 1.5 hr and then started heading back to KLMO to drop my CFII. On the way there around 2020 I checked the KBJC ATIS and the the wind was 270 less then 12 kts. I also checked TAF for KBJC via ADS-B weather on my I pad and the TAF was the same forecasting strong wind at around 2 AM. Landed at KLMO around 2040 dropped my CFII and took off for KBJC at around 2100. Airborne I checked ATIS again. This time it was 18 gusting to 24. The LLWS warning was given. On downwind entry for RW 30R witch I was cleared to land first, tower reported the winds from 250 at 22G33. Then tower changed my clearance to RW 30L due to the jet coming in for landing. On final I was crabbing the aircraft, then on short final I changed to a side slip and had enough rudder to align the aircraft with the runway. Flaps were 20 due to a strong gust and I added 10 mph extra for the approach. 85 mph on short final. Power to idle over the runway at 4-5 feet with left wing dipped into the wind. In the flare a sudden and powerful wind shear from the tail raised the tail very steeply and I lost my aileron correction. With the raised tail I pulled the nose up and touched down on three wheels - soft. At the touch down wind shifted again from the left side and a powerful gust pushed the plane to the right. The plane was rolling about 5-10 mph or so on the grass next to the runway. I was breaking but could not stop in time and the plane rolled into the ditch and flipped on its back. I was wearing a shoulder strap and always adjusting it tight. It held me tight in the chair. I was not hurt. When the tail was raised by a wind shear I was thinking to go around. But 4-5 feet above the runway with sudden strong tail wind I lost a lot of air speed at list 20 mph. With such a strong wind and tail wind shear I did not attempt to go around thinking I would stall the airplane and will not have enough power to break through the wind.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I realize now that I had the opportunity to brake the links of this chain of events on multiple occasions. I should have leave the area at the first report of wings 22G33 and look for another airport and land there. The other opportunity I have missed was on the short final when for a split second I had a strong desire to go around. I believe that overconfidence, since I spent time on training to land with a strong cross winds with my instructor and by my self, plaid a roll and I convinced my self to push my limits. On the other side - the pressure to return the airplane to the clubs hangar knowing that Saturday morning the other clubs pilot scheduled his cross country flight. The desire not to disappoint the fellow club member. Flying from KBJC located at the foothills of rocky mountains, having strong gusts I have canceled a lot of my flights due to gusts at 25 kts. I considered myself a good safety minded pilot. But that evening my mind tricked me. I am disappointed to say the list. I have started the ADM training and plan on continue FAST wings program specifically designed around ADM training.
