Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I was set up for a straight in full stop landing. I had planned a three point landing, for that was my intent for practice on this day. I had performed three satisfactorily and was planning a full stop with taxi to the fuel pump, then done for the day. The approach looked fine with slight correction for a left crosswind (left aileron and right rudder). The airplane settled in nicely with the tailwheel touching down just barely ahead of the mains, pointed straight down the runway close to centerline. The mains hit and then bounced just slightly (maybe 4 inches or less). I applied more back pressure on the yoke. At that time the airplane settled back down on the mains and veered to the left about 20 degrees directly into the wind. I applied right rudder and then full right rudder. Nothing changed and it kept going left. I applied full brake on the right pedal with it still to the floor. Nothing changed. Then as the plane slowed a little the turn tightened slightly and the right wingtip dragged. At that time, the plane nosed over and landed on its back to a rest. I released my seatbelts, and crawled out of the plane waiting for the crash crew to arrive.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Do not read articles in magazines and take the advice of those who you respect and who have done it for a long time. Continue to fly and land as you are comfortable in the aircraft you are in. I had performed 13 years worth of wheel landings in this plane and never had a scare or felt out of control. Then I tried three point landings because your approach is "slower and more in control". I had landing a different plane I had owned for seven years in three point configuration and was very comfortable in that plane. So I did not feel this was a risk or anything an instructor could assist. I was wrong.

The other thing that became a factor on that day, is when I fly, I usually take my cell phone out of my pants pocket and tuck it under my leg, in case I need it for a radio failure or whatever need. On this day, when I went upside down, the phone went flying in the cockpit and I finally found it in the instruments and radios under the dash board (that was now facing up). All of the people I needed to contact at that time were in that phone and if this would have been an off airport incident, I would have had no access to it to call for help. From now on, it will remain in one of my pockets.
