NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>					
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible. On 3/16/2018 at approximately 11:50z, AMF1696 operated as a BE99 from KOMA to KHSI with two crew members under an IFR flight plan. Prior to the flight, the First Officer received a flight release from DFW Dispatch. As part of the release, weather, NOTAMs, and braking action were briefed for both OMA and HSI. Due to the high winds at HSI (1053z observation was 10021G35KT) an alternate of KGRI was established (09021G32KT). The flight departed on time, and without issue, shortly after the release from dispatch. Enroute weather was IMC with light rain showers and thunderstorms in the vicinity. Approximately 50miles from KHSI, weather was checked and the winds were reported to be 09017G32KT with visibility of 10SMOVC031. The decision was made to land on Runway 04 and the crew requested the RNAV approach for landing. ATC approved the request. While on approach the crew checked the weather one final time and continued with their plan to land on 04. After descending below 3000ft, they were clear of clouds and had the airport in sight. The FO contacted Center, advised that they had the airport in sight, and canceled the IFR flight plan. They continued their approach to Runway 04, crabbing to adjust for the winds and set the flaps at 30° for the duration of the landing. During landing, the aircraft touched down on centerline and then briefly bounced back into the air. The captain felt she could get the aircraft back on the ground and touched down a second time, but this time they were left of centerline. Recognizing their position was too far left, the FO called for a go around. The captain responded by increasing power but the engines were almost at idle and it took time to spool back up. Without the appropriate airspeed (approximately 90kts) they were unable to gain altitude and the crosswind continued to force them to the left. The captain described a gust that caught them under the right wing and drove the left wing into the ground (the stall warning horn was not heard by either crew member). The aircraft moved across a grass field located between Runway 04 and Runway 14, the nose gear collapsed and the nose collided with the ground. The aircraft slid, under power, across the parallel runway (Runway 14) and came to rest approximately 20ft off of the edge of runway 14. The FO pulled the condition levers to the engines and turned off all electrical items. Both crew members exited the aircraft. There was no fire and there were no injuries. Please see attached diagram (Attachment #1).
