Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft landed on roadway in direction of traffic. Both of the wings struck roadsides during the rollout (both wheels on the ground, brakes applied) with the aircraft already mostly slowed. There was extensive damage to the leading edges and the left mainspar fractured at the wingroot.

No damage to the fuselage or cockpit. Canopy intact.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Initial aerotow behind the club Pawnee with release at 4950' was uneventful. Subsequent climb in thermal lift to 8600' while waiting for the second glider to launch. Once both gliders were at 8600, the second glider departed southbound and I followed about 3 min later.

I reached Horse Ridge at about 7400' and again climbed in thermal lift to 8600'. I continued south towards Paulina Peak under good looking clouds, intermittently climbing. At this point, I was in radio communication with the glider ahead of me and could see him circling in lift as he headed north towards Sisters. I was climbing in weak lift over the rim of the Paulina caldera, reaching almost 8800'.

As I headed northbound, I encountered strong sink of ~400-600 fpm. I looked for thermals under several likely looking clouds but there was not usable lift. In approximately 7 min I descended from 7300' to 5700' having stopped to thermal three times, with no usable lift each time.

At this point, I was ~6 miles from Sunriver airport with almost 1700' of altitude to use getting me there. Under normal conditions, I would be able to arrive over the airport with almost 1000' to use in the pattern. Heading towards Sunriver, I encountered more, widespread, strong sink.

I chose to fly at 60 kts which is a compromise between best glide (50kts) and getting through the sink area faster.

Review of my GPS log shows that I was only achieving a 12-15:1 glide ratio. At the time I was spending all my energy looking for a place to safely put down. Crossing over a small ridge I had one wing brush a treetop. Shortly thereafter I could see highway 97 and set up for a landing on it. I got my gear down and used my spoilers to set down following a pickup truck as it merged onto the highway. The landing was uneventful and I was rolling out along the highway, speed down to less than 20kts, when my wings struck roadsides positioned on each side of the highway. This collision caused extensive damage to both leading edges and fractured the main spar at the root of the left wing. Drag from the right wing against that sign swung the aircraft onto the shoulder of the highway where it came to rest.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Cross country flight in gliders is always about taking calculated risks. In the Bend area, there are large parts of the local airspace which do not have suitable land-out options. Thus cross country flight becomes a series of decisions about whether enough altitude has been gained to reach the next suitable landing spot. Those decisions are based on "usual" airmass properties. In this case, the usual conditions were disturbed by a large area of sinking air (possibly downslope wind off of the Cascade mountains). The effect was to force a landing away from my pre-selected 'nearest landable'.

In this situation, landing the glider with as little energy as possible would have been desirable in order to shorten the landing roll. With just a little less speed on the rollout, I would have been able to stop in the available space. On the other hand, having a little extra energy significantly improves the handling of the glider and widens the margin to stall. Avoiding a low altitude stall as I was contemplating having to set down in a pine forest had a lot of my attention at the time.
