On Monday March 26, 2018 at 8:00 AM I did a weather briefing from my home. Visibility clear, winds light and variable at surface. I left home at 8:30 and drove to Woodsville, N.H. and picked up six gallons of non ethanol gasoline. I arrived at airport around 9:00 am. I syphoned the gas into the Gyroplane tanks and at the same time turned the Rotax over by hand to prime the sump and checked the oil level. The previous night I had cleaned the rotor and waxed it and did the same to the propeller. I cleaned the wind screen and side windows. I checked air pressure in all three tires and added air to two. In cleaning the rotor I had rotated it 360 degrees twice and tilted it numerous times. I greased the rotor head and checked all connections. After fueling the plane I moved it outdoors and did a walk around starting at the passengers door, checking tires, draining gas sump, rear tail surfaces and rudder. I check gas level and it was between 1/2 and 3/4 of a tank, about 17 gallons. I checked coolant level and did a visual check of gyroplane. I cleared the area and started the engine. I turned on instruments and checked all gauges. I set the radio to 122.8 active and 118.65 Lebanon ATIS, standby. I taxied across grass to the tarmac and sat for approximately 20 minutes for engine gauges to come into the green. I checked controls, instruments, gas valve, set altimeter to 580' and did run up checking mags. I put check list away and cleared the area. I then taxied to the runway I observed the wind sock was limp and elected to take off on runway 01. I radioed my intentions and back taxied to end of the runway and lined up with the center line headed north. I set RPM at 2000 and brought the stick full forward and engaged pre-rotator and slowly brought RPMs up until the rotor was turning at 200 RPMs, I disengaged pre-rotator and brought the control stick all the way back, full throttle and released brake. I kept the plane on the centerline and when the front wheel became lite I pushed the control stick forward, it resisted and I put both hands on control stick and tried to push forward, I could not move the stick forward and could not control the plane. I chopped the throttle and as I did the plane veered to the left and the rotor struck the pavement at about the 8 oclock position, the plane flipped onto its left side and skidded down the runway and over a snowbank on the left side of the runway. I unhooked the harness and stood up and opened the door. I reached back in and shut off ignition, gas, and all switches. I climbed out and was helped down by Stuart McDonald and another man who had come running over from the town garage. The plane was laying on the gas cap side and we could smell gas. We moved the plane upright and figured the gas was coming from the vent and that stopped that. I estimate that no more then a quart leaked out. We then picked up all the debris on the runway and moved the plane to in front of the hanger. I called the airport manager and left a message. I then called the Lebanon, N.H. control tower and informed them of what had happened. They called Boston control and they routed us to Portland, Me. FAA. The airport manager arrived, Dennis Cunningham, and he called the NH DOT and reported the accident. Lebanon control tower reported the accident to Hanover dispatch for police, ambulance and fire department and they all responded. Lebanon control tower told us not to move the plane until it had been released. I explained we had moved it away from the runway and the runway was clear. When we recieved permission to remove the rotor, we removed the center pivoting bolt and the head moved forward and freed up the stick. I noticed the pre-rotator shaft was not connected. In retro-spect, I had difficulty moving the control forward and did not have control of the gyroplane as I approached lift off speed. I think the front wheel was off the pavement but the mains were not. When I pulled the throttle back and the rotor struck the pavement I lost all control and the result was it rolled over onto its side and skidded off the runway to a stop. I would like to have the shrouding removed from the rotor mast and the center console removed for inspection, if at all possible.
