Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right main broke off due to excess side load causing substantial damage to the airframe where the gear attached, there was also a prop strike after gear broke off.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was making a cross country flight to KHIO to satisfy the remaining 0.8 of an hour I had left for my solo requirements. I was feeling really comfortable in the aircraft and it was a beautiful day. First and foremost I will admit that I believe I got complacent during this flight and was excited to be nearing my checkride. I was cleared to enter the right downwind for 31L from KHIO ATC. As I became abeam 31L I was cleared to land 31L number 2 and was given a wind report but it did not completely process since I was in a critical phase of flight. In my quick process I took the wind report as a cross wind report not a quartering tailwind as it turned out to be. I proceeded to follow my instructions to land 31L, upon landing after my initial roll out, the aircraft became uncontrollable and went into a ground loop. As the aircraft was skidding sideways down the runway the right main gear snapped off and then a prop strike happened. Once I realized what had happened I reached over and shut off the engine and was given clearance from tower to exit the aircraft at my discretion.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Upon reviewing what happened with my instructor and thinking about the events leading up the accident, we determined that I need to be sure I am always 100% in the cockpit, I hate admitting to being complacent but that is a definite factor in this accident. My instructor and I are also reviewing PIC authority and wind direction, I believe that if I would have had a better understanding of PIC authority and wind direction, I may have questioned or stated "unable" the towers instructions to land with a quartering tail wind and executed a go-around or asked to be set up on a different runway. We will also be doing re-current training on tailwheel aircraft and the different things that affect such aircraft. I can and will state that I am 100% responsible for this accident and am frankly embarrassed. But the most important thing that I can take away is that I was able to walk away from this accident and to be sure I learned from it.
