Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to right wing outboard of main landing gear, underside from leading edge back to main spar.
Damage to one PAPI light.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Tuesday, March 27, at approximately 2 PM I planned to make a short flight from KFUL to KEMT and back, enough time to warm up the engine oil to facilitate an oil change. I was in no hurry and had no time constraints.

Solo, I taxied out to the run up area, copied the ATIS, reset the altimeter, and checked the other flight instruments. After completing the engine runup and pre-takeoff checklist, I contacted ground control for taxi instructions and, per the ATIS, was given Runway 24 via taxiway Alpha. I taxied to runway 24 and called tower "holding short runway 24". The tower cleared me for takeoff. I taxied onto the runway and lined up on the center line. As customary with my Swift, I slowly advanced the throttle with full aft yoke and right rudder input. At full throttle, more right rudder was needed to keep aligned with runway. Apparently over controlling with right rudder, the airplane veered some to the right. I released the rudder, and about the same time the tail came up slightly and the airplane immediately turned left. At that point I didn't have enough rudder or braking control to keep the aircraft from exiting the runway. The airplane impacted one PAPI light with the right wing and came to a stop upright with the prop stopping by hitting the soft dirt. I shut down the airplane, closing the mixture, insuring the mags were off, the master switch off, and the main fuel valve was closed. I open the canopy and exited the aircraft. Except for some abrasions on my left elbow that bled some, I was not injured. The paramedics were called and they did bandage my elbow. All the airport service people were very quick to respond, much appreciated in such a stressful situation.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I've made hundreds of takeoffs and landings in this airplane. Always in my pretakeoff checklist, I do a takeoff self briefing covering how I will make the takeoff, coordinating power, rudder, yoke and vision. I always make sure the airplane is not moving while briefing. Also included are "what if's" like power failure during and after takeoff and climb. Even though I was in no hurry, in retrospect I don't recall doing the entire briefing. I may have, but sometimes when a routine is interrupted or a new detail is added or deleted it can seem like the task has been completed.
