NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I left KBTF for a planned VFR round trip flight down to Delta, Utah. The purpose of the flight was for pleasure/practice. My plan was to leave KBTF, travel through SLC B airspace, then Provo, and do touch and go landings at Nephi (U14) and Delta (KDTA) and then return back to KBTF.

I departed KBTF at approximately 11:30am. Full preflight, taxi, run-up, and departure were all uneventful. Wind was calm to 7kts from the North. I flew above Bountiful and North Salt Lake and obtained clearance from Salt Lake Tower to enter B airspace and continued down to Provo, which also cleared me through their space to continue south. In each instance, radio communications, flight operations, and automated information were uneventful.

Nearing Nephi, Utah, I communicated with the area traffic that my intention was to enter the pattern and perform a touch and go. The Nephi AWOS was not responding so I flew over the airport midfield and noticed the wind sock indicated wind from the west. A fire on a hill at the west end of the valley also had some visible smoke that indicated wind directly from the west. I radioed to the traffic to ask whether 17 or 35 was in use, and another pilot confirmed that they were using 17. I entered the pattern from a 45deg angle on the 17 downwind, got into pattern altitude, and went through base and final portions of the approach without difficulty. Just as I came over the north end of the runway, and began to flare, the plane lurched to the left of the runway, yawed to the right, and nosed down. I corrected to get the plane parallel with the center line, and then it immediately dropped to the ground. I am not sure what that distance was. It felt like a "hard landing" but I maintained the aircraft on the centerline, and aborted the touch and go in favor of rolling down the runway to taxi off before resuming my course. Engine, aircraft controls, instruments, power, etc., all continued to seem normal. I did not have any injury or discomfort physically.

I taxied to a spot where I could stop and assess the situation. The plane drove straight on the runway and taxiway. There was very little traffic at the airport at the time (a helicopter was in the area, and one other aircraft had been taxiing after I landed). I powered down to idle, checked instruments, set the parking brake, checked all flight controls, and performed a power up and down without any noticeable abnormalities. I went to idle, opened the pilot door and inspected the left landing gear, which appeared normal (tire, etc.) and then opened the passenger window and looked down and did not see anything abnormal with the right landing gear. I leaned out and looked at the nose gear tire, which was intact.

I decided at that point to return to KBTF. I taxied to the north end of the airport, radioed my intent to depart, entered the runway and had an uneventful power up, roll, rotation, and departure. I passed through Provo and SLC airspace uneventfully. I entered the pattern for 35 (right pattern) at Bountiful (KBTF) at approximately 1:40pm, had an uneventful approach and landed on 35. I taxied back to the tie-down area in front of Bountiful Flight, and powered down. As I pushed the aircraft back into the parking spot, I noticed the tips of the propeller were bent (about the outer 2 inches on both ends). Then I noticed some buckling in the metal on the passenger side, right at the aft end of the engine compartment.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

As I review the landing, everything was going well until that last moment. I feel that it may have been a tailwind gust that caused the plane to lurch sideways. I did my best to control the aircraft to avoid a sideways landing. Perhaps that was when it stalled and came down hard, and the nose dropped. I believe that more experience could always be helpful.
