NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

About 11:00am we did 4 take offs and landings at Tahoe (KTVL) and then went to MEV (Minden Nv.) and talked to Richard Strand (an I.A. mechanic) about a com radio problem. He then directed us to check with a Carson city airport (KCXP) electronics man also named Richard who then directed us to Stead airport (KRTS) where we were able to get the com. radio repaired.

We then flew back to Tahoe and did some take offs and landings. we were on the 5th landing when we were rolling to the end of the runway. Ken was getting closer to the point of soloing the airplane and I was letting him have the controls longer and I was having to correct less for him. As we were taxiing to the end we had some tail swerve which is usual for conventional gear planes. We then experienced the ground loop to the right. We went off the right side of the runway and onto the grass where the ground was very soft because of recent heavy raining, the left main dug into the soft surface and caused the plane to tip to the left causing the subsequent damage.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

As you might imagine I've gone over this in my head a hundred times since it happened and am having a hard time coming up with a direct action that led to the accident that I could have taken or would have done differently. Since in the course of training there is always an element of risk involved I don't know what I could have done differently to avoid this accident except for a quicker reaction on my part. I have taught 70 people how to fly (many of them in tail draggers) and with over 17,000 take offs and landings without a ground loop or ever going off the runway I didn't even consider being off the runway and into that muddy ground. Since all other conditions were optimal except for the wet ground off the runway surface the only thing I can think of is anticipating being on that soft ground.
