Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Structural damage to engine supports. Water damage to instruments, radios, & electrical, with some recovered. Damage to fiberglass hood and turtle deck. Right wing will need new battens and covering Left wing OK. Engine recovered two days after submerged. Oil flushed four times and engine ran for 30 minutes.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

This was the second day of touch-and-go practice on the St. Johns River near my house (on the river). The first three landings of this day (04/06/2018) went well. In my great wisdom to refine the landings, I decided to put pieces of tape on the inside of the windshield so that I could better judge the horizon during landing. On landing #4, I was flying the final approach at 60mph with the recommended 20 deg. of flap. I set down on the water nicely but decided that the nose was slightly high (as judged by the stupid tape). SO, I gave the stick a slight push forward and the plane immediately nose dived and flipped w/o warning. I had no idea that it would do that, even after talking with several instructors and Searey pilots, prior. Afterwards, I spoke with the Designer/Builder of the Searey (with the "B hull") and he confirmed that the B hull does have that nasty characteristic. AND, that the newer C hull will not flip, even with the stick pushed all the way forward at 40 mph.

I did try to get instructors to teach me to fly this thing and actually had one come out, comb it over, and test fly it. He apparently got busy and wouldn't return calls. The next one required insurance that was impossible to get. None-the-less, and admittedly, I should have kept trying until I got an instructor.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

Get lessons from the manufacturer in make and model if possible. Also, spend more time going to fly-ins and talking to pilots of the aircraft. I actually did some of that but obviously not enough. Sign up for internet blogs and ask questions about the nature of the particular model of aircraft that you intend to fly. I certainly could and should have done more of that.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
