Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Main and nose gear torn off. Severe scraping of the bottom of fuselage, & 20 feet of the 6 foot anchor fence with a 1 1/4 iron pipe, around the airport was broken.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I went to the airport to install a new battery in the airplane. I made a walk-around inspection of the plane, checking the tires, knowing that I had just completed the annual last month. I pushed out the plane and primed the engine and pulled the prop through several times, my usual process. After I got into the plane and fastened my seat and shoulder harness, I was surprised that the engine started on the first turn over. I taxied to the runway (my canopy was open) and I radioed to announce that I was back taxiing on the active runway. Halfway down the runway I decided to close the canopy because I was getting a little cold. After I reached the end of the runway, I did my engine check and looked and listened for any aircraft that was about to land or in the immediate area. I was not aware that I forgot to latch the canopy, and proceeded to announce that I was departing on runway 20 and staying in the pattern. I applied the power and the aircraft raced down the runway where at 70 knots I left the runway and proceeded to climb. At an altitude of 200 feet and air speed of 90 knots my canopy flew open. I was surprised that it was not torn off the aircraft. The wind on my face was so severe that I could not see properly, I held my hand to my face to protect my eyes and reduced the effect the wind had on my eyes. I knew I was in trouble so I decided to immediately turn downwind for landing. All the time I was about 300 feet above ground trying to keep the airport in sight and flying about 80 knots. When I turned final I was about 200 feet above ground and about one quarter mile to the runway. Because of the difficulty seeing and staying on course I missed judged the fence and hit it with my nose and main gear ripping both from the aircraft. At that time I was about 10 feet from the ground and about 70 feet from the runway. Touching down on the runway and skidding about 50 feet I came to a stop. I stepped out of the aircraft without any signs of injury - not even scratch.

I walked the entire length of the runway and back to the hanger, where my car was. I drove to a maintenance hanger, hoping to find someone there to help me get the plane off the runway. Finding no one, I drove to back to the airplane and began picking up debris that was on the runway. Shortly thereafter I saw a city worker driving a truck on the grounds adjacent to the runway. I waved to him and he came over. He was more concerned about my physical being initially, as he was asking questions about my well-being. I then asked him to help me get the plane off the runway. We tied a rope on the airplane and pulled it off the runway then down into my hanger.

The terrain is flat, the landing gears fell before the plane reached the runway upon contact with the fence.

Depart time is approximately 1350.

Intended destination was the pattern.
