Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Visible damage to right wingtip, right aileron, and propeller. Unknown damage to engine, landing gear, and airframe.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

N35VM departed runway 32R at Grant County International (KMWH), Moses Lake, WA for Felts Field (KSFF), Spokane, WA at approximately 1800 on April 27, 2018 under visual meteorologic conditions with VFR flight following. Navigation was performed using visual landmarks. Conditions on arrival at KFSS (approx 1900) were winds variable @ 3kts, visibility 10SM, sky clear, temp 20/dp 02, altimeter 29.66. Cleared for landing on runway 04R. Decided to execute three point landing slightly long since hangar is located at east end of airport. Maintained a stabilized approach to landing on runway 04R with minimal aileron, rudder, and power corrections required during approach. Standard rudder corrections were required during roundout and flare in an attempt to keep the longitudinal axis of the aircraft in line with the path of travel. At the time of the three point landing, the aircraft was yawed slightly to the left of the path of travel. The traction of the right tundra tire on pavement combined with the leftward yaw caused the left wheel and wing to rise. Left aileron and right rudder inputs were quickly made in an attempt to straighten the aircraft and lower the left wing. The aircraft started a ground loop, traveled left of centerline, and ultimately exited the runway to the left. As the ground loop progressed, the side load on the right wheel caused it to dig into the sod causing the aircraft to tip and dig the right wing into the ground. The aircraft then nosed over, resulting in a prop strike. Afterwards, the aircraft settled back into a three point attitude.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Request to land on the sod adjacent to runway 04R as it would have been more forgiving with tundra tires.

Judicious application of right brake - During training, the use of brakes was strongly discouraged by multiple instructors. The reason given was that in many instances, the overuse of braking has led to a groundloop or inversion of aircraft. In this instance, application of right brake may have halted the ground loop but it could have also led to a groundloop in the opposite direction if applied too aggressively.

Increased diligence to maintain longitudinal axis of aircraft in line with path of travel at the time of landing.
