NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On April 24, 2017, I departed Sandpoint, ID (KSZT) on the second leg of a flight that originated at Arlington, WA (KAWO) with an ultimate destination of Piqua-Hartzell Field, Ohio (I17). At Sandpoint, where I refueled the aircraft, I checked the weather and planned my next stop of Butte, MT. About 1.5 hours into my flight I realized that I had an issue with the elevator trim and a landing to check it would be a good idea. I checked ForeFlight on my iPad and determined that Meadow Creek Airstrip (0S1) was suitable. There were no NOTAMs listed for the strip and nothing in ForeFlight indicated that it was closed. I made two passes over the field at about 400' so I could check the surface. On the first pass I noted, the runway to be snow covered and I could see some tracks from another airplane in the snow, leading me to conclude that it had been recently used. As I flew the second pass, I again noted the airplane tracks in the runway. I also saw the runway markers sticking up out of the snow, leading me to believe that the snow was about 2-3" inches deep, well within the capabilities of the aircraft. The wind was calm and I intended to land to the south, check my trim connection and depart to the north. I flew a normal approach with full flaps to the surface. Initially, after touching down, the surface felt as I expected. As the airplane slowed it began to sink into the snow and decelerated very quickly. When I realized the snow was much deeper than I thought, I attempted to go around, applying power but it was too late. Even with full up elevator, the tail rose up to the point where the nose dug into the snow causing it to flip over onto its top. I shut off the fuel and master switch and released my seat belt. Upon examination of the aircraft, other than being upside down in the snow, I saw no damage to the exterior. In my estimation, the incident was caused by snow on the runway that was deeper than it appeared from the visual cues that I obtained (tire tracks and runway markers) during two passes to determine whether landing was feasible.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

In my estimation, the incident was caused by snow on the runway that was deeper than it appeared from the visual cues that I obtained (tire tracks and runway markers) during two passes to determine whether landing was feasible. If the airstrip was NOTAMed closed, it would have prevented me from attempting the landing.
