Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The last four inches of both tail rotor blades dented and scuffed.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 4/29/2018, at approximately 11:35 am, pilot in command (PIC) and lineman (seated to the pilot's left on work platform) departed the landing zone, located at coordinates N40.14, W82.31. The crew traveled eastbound on the south side of the power lines for ¾ mile, crossed over a structure and turned back west to begin work.

The PIC descended to the outside phase and then moved the aircraft laterally toward the line. During the approach, the lineman bonded onto the wire and began installing a new spacer between the 4-bundle conductor. As the lineman was working to compress and lock the upper inboard spacer connector, the pilot maneuvered the helicopter closer to better position the lineman.

During repositioning, the PIC heard a noise and felt a vibration from the tail section. Upon realizing the tail rotor made contact with the conductor, the pilot communicated with the lineman to ready and unbond from the conductor. The PIC then moved away from the wire and felt no abnormality of flight. The pilot flew the aircraft under normal operating condition back to the landing zone with no further event. The helicopter was then shut down according to procedure.

During the inspection of the aircraft, the mechanic found the last 4 inches on both tail rotor blades dented and scuffed. No other discrepancies noted.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

To have prevented this incident, pilot should have focused first on the position of the helicopter prior to moving the linemen., and needed to ensure proper clearance to move to the left.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)
