Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Landing gear collapsed. Prop strike, both engines. Structural damage. Fuselage intact and pressurized.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed KAPC (Napa, CA) ~1600 PST. Picked up ATC for Flight Following on departure. Clear and smooth conditions at 16,500. Destination 6K5 (Sisters, OR), Home airport. Approximately 1730 PST, ATC canceled FF. Picked up AWOS. Landing planned for Runway 20 due to wind direction. Runway 20 requires a non-standard (steeper ~6-degree) approach due to rising terrain starting ~700-feet from the N end of the Runway. The 20 final approach crosses over pine tree terrain, an open meadow, into treed wind barrier on the W. Encountered significant low-level wind shear and sink rate at approximately 800-feet from the end of the runway at 97 knots. Initiated a go-around but could not recover. Impacted approximately 150-feet short of the runway, collapsed the landing gear, and skid to a stop in approximately 300-feet. Opened the doors w/o extra effort and exited the aircraft at approximately 0745 PST.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Avoidance of a non-standard or steep approach in this direction during wind/gusty conditions.

A longer landing may have avoided some of the wind shear area at the risk of an overrun. Landing on 02 in the opposite direction would have also minimized the wind shear potential but also risked an overrun due to tailwinds.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

This airfield (6K5) is a Public use airfield that is Privately owned by the pilot of this reported incident. The airport has put significant effort into airport infrastructure and safety improvements over the last 7 years. Improvements include a replaced and wider runway (60-feet), taxiway, LED lighting, AWOS, and a 300-foot paved RESA (Runway End Safety Area, overrun) on the N end.

Due to the historical nature and encroachment of the surrounding land use zoning, the County required the RESA to be removed even though it was part of the Part 77 Primary Surface. If the RESA were available for this flight, the pilot may have opted to land on 02 with a slight tailwind to avoid the wind shear and steep approach required of 20.

Housing encroachment has been allowed in the rising terrain in the N approach zone. This should not have been permitted by the County, and is difficult to mitigate at this point.

The rising terrain includes growing pine trees. The trees should be required to be trimmed to mitigate a further steepening of the final approach.

An off-site taxiway from an adjacent, unapproved TTF community was historically allowed to be install a parallel taxiway entering from the end of the runway. This creates a significant line of sight obstruction and taxiway/runway excursion potential. The taxiway was also incorrectly built and creates flooding on the runway.

Due to the difficulty of having a local and rural land use commission enforce airfield safety requests, the airport owner/sponsor requests a letter from the NTSB in support of tree trimming in the 20 approach zone, and removal or relocation of the off-field taxiway w/o TTF security.
