Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

THE AIRCRAFT RAN THRU THE AIRPORT CHAIN LINK SECURITY FENCE, AND THE NOSE GEAR LODGED IN A DITCH. THIS DROPPED THE GEAR DOWN CAUSING THE PROP TO STRIKE THE GROUND, BENDING IT AND CAUSING ENGINE STOPPAGE. WHEN THE AIRCRAFT DROPPED INTO THE DITCH, THE LEFT OR PILOT SIDE WING STRUCK THE GROUND, BENDING IT UP AT THE WING TIP.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The following is the account given by the pilot ("Flight Crewmember 1") following the accident:

I was doing a training flight for a up coming CAP check ride. The main run ways 17 & 35 are closed for paving . I was using Runway 23. The first sortie was a short field take off max performance climb at 59 knots. I climbed to pattern altitude 1500 msl left traffic normal pattern altitude 1500 MSL . Normal approach normal landing. Had a right cross wind of about 50 degrees 12 knots G /16kts. I taxied back to RNY 23 via the parallel taxi way. this time I did a soft field take off I used 20 deg flaps lifted off and stayed in ground effect while letting the speed come up. then a normal departure. I had planned to fly to Madisonville, KY Madisonville Regional airport (2I0) for more flight training. FT Campbell departure informed that a couple of cells were near the airport. It looked good to the east so I changed my destination to Russellville-Logan County airport (4M7). The wind was out 332 degrees, at about 10-12 knots. Entering downwind to RNY 25. Altitude 1500 MSL, the normal pattern altitude at this airport . Practiced cross wind landing by crabbing until near runway, then pulling the nose around with the left rudder for runway alignment. 90 knots mid field 80 knots left base and 70 on final 20 degrees flaps. Flew one more pattern at Russellville .Then headed back to Outlaw Field. I requested a practice RNAV (35) approach with a break off to Runway 23. At 1500 ft. MSL everything was normal but as I flew out of the trees that surround the approach end of Runway 23, I started getting a pretty rough ride with lots of up down. I still had the cross wind. I decided to abort the landing. I climbed out and remained in the pattern. At 1500 pattern altitude I thought it died down. On this approach I could see rain at the north end if the field. I had a up down shears and changing cross winds. I landed and I don't know if the wind switched to a tail wind, but the brakes didn't appear to have the normal stopping effect . I ran off the end of runway 23 then through a chain link security fence and nose gear dropped into a ditch. The aircraft spun to the right dropping the pilot side wing tip to the ground. The prop contacted the ground causing engine stoppage. There was no leakage of fuel or oil. I turned off the fuel, the magnetos and Master switches. Next the emergency people were putting me in the ambulance checking vitals and taking me off to a local hospital for more tests.
