Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

I have not had the opportunity to fully inspect the aircraft due to investigation. I did observe damage to rudder, right sub and main wing, axles, left wheel spokes, fabric, and propellor.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Planned first test flight of homebuilt experimental full-scale Nieuport 17. After pre-flight and AWOS check, taxied to runway 8 run-up area. Checking the AWOS once more for winds (reported CALM at that time), and waiting for local traffic to clear the area, I announced my intentions to conduct a planned first test flight of an experimental aircraft. At approximately 9:14 MST, I aligned on the center of runway, added full power for planned 3-point takeoff. Aircraft became light on its wheels, and then yawed to left as tail came up. I determined it safest to maintain directional control over a correction, anticipating a rapid rotation. I continued to maintain level flight in order to gain airspeed, but the aircraft appeared unable to accelerate sufficiently or generate enough lift to climb out of ground effect. This condition continued until the aircraft continued beyond the levelled dirt margins of the runway and entered rougher, slightly-rising ground marked by mesquite mounds. I must assume that the aircraft made contact with a mesquite bush before the propellor struck the ground and the aircraft flipped over on to its back. The engine had come to a stop, and I was able to release my restraints and exit the aircraft safely. The duration of the "flight" was perhaps less than a minute, but I cannot say with any precision. This narrative is based on my best recollection of events, but is naturally subjective.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Since, to my knowledge, this is the first flying version of this particular aircraft flown at this altitude, I think consideration must be given to the power requirements to safely fly this aircraft under local conditions. Based on all available data (including recommendations from the designer), it would appear that I should have had sufficient power for this aircraft fly. But my short "flight" experience tells me that this aircraft could not have become fully airborne as currently configured. Again, this is my subjective opinion as the builder and test pilot.
