Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Mass crumpled. Landing Gear Leg tore off. Cracking of Carbon Fiber around front tire. Rotors destroyed. prop blades all cut in half. Partial Damage to tail feathers. plexi-glass canopy shattered.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

8:00 PM. Flew 1 mi. SW of KCZL to check on a buddy at his farm. I was flying behind the power curve. Lost altitude. got boxed in and couldn't tell if there were power lines ahead of me or not. decided not to risk it and choose a hard vertical decent landing. terrain was uneven, slightly hilly so no good place to land without rolling over on landing therefore the reason I choose vertical decent. all-in-all went very well for me.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I was distracted for a few seconds while holding vertical position, descended which got me boxed in. I was below ~~400~~ or at 400' initially. The split second distraction was my problem. I didn't have the hp to fly out of it. Prop was set at cruise angle. I needed more bite from the prop to fly out of it. I was flying behind the power curve below a safe altitude.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
