Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> MAJOR STRUCTURAL DAMAGE TO LEFT WING AT INBOARD END OF THE AILERON. DAMAGE TO TRAILING EDGES OF BOTH WINGS. MAJOR DAMAGE TO AILERONS, ELEVATOR, AND HORIZONTAL STABILIZER. NO DAMAGE TO PROPERTY		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>		
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible. After a normal takeoff, aerotow, and release, the glider pilot practiced thermal soaring in the local area for approximately 1.3 hours. The glider pilot reports that, while returning to his home airport, he was unable to find enough lift and did not have enough altitude to cross a section of forest between his location and the destination airport. He conserved his altitude for as long as possible while searching for a suitable place to land. He selected a field and entered a landing pattern for that field. He states that, upon turning onto base leg, he determined that he did not have enough altitude to clear a line of trees at the threshold of his selected field. He then continued straight ahead, parallel to the line of trees, until impacting the ground in a small clearing. The pilot reports that there were no preaccident mechanical failures or malfunctions with the glider that would have precluded normal operation, and that there was no loss of control prior to impact with the ground.		

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The primary cause of this accident was the glider's encounter with atmospheric conditions where the lift was not sufficient to maintain flight, which resulted in an off-airport landing.

The accident may have been prevented by choosing a more suitable place to land earlier in the flight.

The accident may have been prevented by executing a higher approach to the selected field.
