Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left landing gear folded under aircraft, Left wing damaged, Propeller made ground contact and was damaged, Fuselage had dents in it, Engine cowling dented.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was practicing takeoffs and landings at E25 (Wickenburg, AZ). The weather was clear and visibility was better than 10 miles. The winds were light and variable, slightly favoring runway 05. Temperature was about 75 degrees.

The first 3 landings were uneventful. After the 4th landing I slowed down to about 20-25 mph re-configured the flaps for takeoff. Suddenly, the aircraft turned sharply to the right. I attempted to arrest the turn with full left rudder and left brake application. I was unable to stop the turn, which aggravated and a ground loop ensued. Aircraft departed the runway at a 90-degree angle to the runway. As the aircraft left the pavement and entered the gravel, the left landing gear folded and the left wing contacted the ground. The nose dipped down and the propeller contacted the ground as well. The engine came to a sudden stop. The airplane came to a stop about 1,500 down from the approach end of runway 05 and about 20 feet to the right of the runway. I secured the airplane and exited from the left door.

My only explanation and conclusion to as why the aircraft turned suddenly to the right is that a sudden quartering tailwind gust from the right hit the aircraft inducing the sharp turn to the right and subsequent loss of control.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The light and variable winds in the dessert can be very treacherous. There are often sudden wind changes and dust devils, especially during the spring time. Making touch and go approaches can increase the hazard. I would recommend to make a full stop landings and if enough runway remains then make a normal takeoff. If there is insufficient runway then stop and taxi back for the next takeoff.
