Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Wing tip damage, elevator damage, right gear, and front gear damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On the 17th of May 2018, I was practicing a max performance takeoff, which I have practiced and had demonstrated before. I chose runway 1 at Skylark field (KILE), with winds calm. I set the flaps to 10 degrees, as called for in the ACS, and accelerated to 60 mph. I then raised the nose, and once off the runway, pitched for 52 mph, the V_x in the POH, for approximately 2 seconds, to simulate clearing an obstacle. I then pitched over for 72 mph, the V_y in the POH, for max climb. At this point, there was a rate of descent, so I pitched back slightly to attempt to regain some altitude, but I immediately got the stall horn again and felt the beginning of lack of responsiveness in the controls. At this point, I didn't have altitude to pitch over to stall recover, so I leveled the aircraft to touchdown at a relatively upright and forward attitude.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The Cessna POH for this 150F, and for the 182 I have been flying, gives you a Vx that is below the stall speed. The ACS requires you to maintain Vx +10/-5 for a maximum performance takeoff. This is the cause of this accident. The ACS should include language that ensures the speed you are attaining is above stall speed on takeoff to ensure that you are not in a stall condition upon takeoff, where you do not have the altitude to properly recover.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No*(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)*

There was not a malfunction, to my knowledge. It is possible that the engine wasn't performing at optimal performance.
