**Description of Damage to Aircraft and Other Property** *(Use additional sheet if necessary)*

The leading edge of the left wingtip was sheared off from the tip to approximately 15 inches inboard. The leading edge of the left wing root separated from the fuselage by about one inch. An area of the fuselage about two and one-half feet by two feet in the vicinity of the left wing trailing edge was crumpled and deformed. No other damage was visible.

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On May 27, 2018, I left from Piatt County Airport (2K0) in my glider, N1075G, an SZD-36A "Cobra" for a pleasure flight. I departed at 12:48 CDT intending to return to 2K0 later that afternoon. I took a tow behind the Illini Glider Club's towplane, a Piper Pawnee 235, N8902L, to 2000' AGL, released, and began following a band of cumulus clouds extending from just East of 2K0 toward the SSW. About 45 minutes later I was in the area southwest of Hammond IL when I noticed a rain shower to the west. I continued to look for lift in that area but didn't find much, and I did notice that the rain shower seemed to be growing. I decided to return to 2K0 but began heading NE instead of straight N to put more distance between myself and the rain shower which was continuing to grow. My glider has a wooden structure with a fiberglass shell so I really didn't want it to get wet if I had to land out somewhere. I was looking for lift as I headed NE but wasn't finding any, and it became clear that I would probably have to land out. In my 15 years of flying gliders I've landed out a number of times and I know that the proper procedure is to first pick an area where you want to land, then pick the specific field, and arrive over that field with enough altitude to do a circuit around it looking for hazards, then fly a normal pattern and land near the center of the field to avoid any obstacles that may be near the edges of the field. Unfortunately, I didn't choose to do it that way. I didn't want my glider to get wet so I tried to get as far as possible from that rain shower. I picked my field from a distance and lined up for a straight in approach. There was a road and a pole line along the western edge of the field, and I lined up my approach to land and roll out just to the east of that pole line so the glider would be close to the road and easy to move onto its trailer, which I planned to park on the side of that road. I picked a touchdown point in the SW corner of the field and touched down almost exactly at the spot I had picked. As I rolled out along the field and slowed, I began to have a little trouble with directional stability and started to drift toward the pole line. The last pole in the line had a guy wire that stuck out perpendicularly to the pole line and though it only stuck out a few feet, it was far enough that my wingtip struck the guy wire. At the time of the collision I had slowed considerably and think I was going about 15 mph, but that's hard to estimate and I could have been going faster or slower. The collision didn't feel violent at all but the glider spun 90 degrees as it skidded quickly to a stop. I wasn't hurt at all. I received no bumps, no bruises, no cuts, and I had no pain afterward. The glider was heavily damaged though. Besides the damage to the wing tip, the torque from that impact on the tip of that long wing crumpled the fuselage near the wing root and slightly separated the wing leading edge from the fuselage. As far as I can tell, there were no other areas of damage to the glider.

**RECOMMENDATION (How could this accident/incident have been prevented?)**

## Operator/Owner Safety Recommendation

This accident could have been prevented easily if I had made better decisions. My worst decision was to land so close to the pole line, since landing and rolling out even a few feet further from the pole line would have prevented the accident. But I also should have chosen a field earlier when I had more altitude, then circled the field, and landed near the center, even if that meant risking a soaked glider and an inconvenient retrieve.
