Thunderstorms far to the south in Louisville KY area

DAMAGE TO AIRCRAFT AND OTHER PROPERTY					
Aircraft Damage ☐ None ☒ Substantial ☐ Minor ☐ Destroyed ☐ ☐ Unknown		Aircraft Fire ☒ None ☐ Both Ground and In-Flight ☐ In-Flight ☐ Fire at Unknown Time ☐ On-Ground ☐ Unknown		Aircraft Explosion ☒ None ☐ Both Ground and In-Flight ☐ In-Flight ☐ Explosion at Unknown Time ☐ On-Ground ☐ Unknown	
Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Right Wing had substantial damage and separated from fuselage. Right stabilator bent, engine cowling slightly dinged on right side. Fuselage skin wrinkled at right spar connection					
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>					
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible. My wife and I boarded N95410 and departed AFW approximately 6:50 central on May 27, 2018. Landed at 7M3 (Bearce MO) for a bathroom break at 09:54 Central and departed at 10:10 Central . Landed at Kennett MO (KTKX) around 11:30 Central. Had lunch and topped off fuel tanks. Departed around 1:05 PM Central / 2:05 Eastern. Cruise altitude 3500 feet with scattered clouds around 5500 ft to 7500 ft. Approaching Louisville KY we noticed thunderstorm activity in the vicinity of Louisville and detoured West approximately 50 miles to avoid the pop-ups. We passed over French Lick (KFRH) and turned East to pass South of Cincinnati OH. South of Cincinnati at approximately 3500 ft altitude heading generally East the engine began to run rough and lose power. I immediately turned southward toward the nearest airport (K62) and slowed to 100 knots. I then pushed the mixture to full rich which caused a short burst of power which lasted just a few seconds. I also pumped the throttle and applied carburetor heat. I then realized I did not have enough altitude to make it the airport and looked around for a landing site. The terrain was mostly steep wooded hills and then I noticed a field situated on a ridge to my left. I decided I had a chance to make it to the field so I slowed to 75 Knots and pulled one notch of flaps and trimmed for landing. I told my wife to check her shoulder harness and brace herself. She reached over and made sure my harness was tight and then I lined up with the ridge and pulled full flaps at about three hundred feet above ground. I saw that the ridge sloped uphill so I waited until we were at flare height and brought the nose up to the horizon which was above us by then. We made a smooth touchdown in wheat approximately 3 feet tall and then the right wing contacted something and with a loud bang separated from the airplane. We slid approximately 200 feet further and came to rest upright. We later saw that it was an Industrial Irrigation head/nozzle that the wing hit. I turned off the master switch and we exited the airplane. We both had little reception on our cell phones, so we walked uphill toward a road. As we approached the road we saw two pickup trucks approaching. They had seen us going down into the field and came right away and one told us that he had already called 911.					

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

1. During engine out practice, make fuel selector check the first part of restart procedure.
2. My wife and I are going to make a list of what to do if engine quits for what airplane he fly and are going to drill each other.
3. I don't know about new Pipers, but I would suggest that any aircraft built have the selector valve in the same area as the rest of the engine controls. In the Piper Cherokee the selector valve is next to the left seat pilots left ankle where it is somewhat out of sight and out of mind.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
