NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Day was forecast for good soaring with high convective activity and high potential for overdevelopment. I was delayed slightly in launching to help another pilot assemble his glider. Rain showers moved through the valley west to east as we waited for favorable conditions. Nephi airport lies in a flat valley 6-8 NM wide with a NS mountain range east up to 11,000ft (max elevation 6000 AGL, field elevation 5020MSL) and a lower line of hills to the west (max elevation approximately 1400AGL.)

At approximately 13:30 local time, I instructed my tow pilot to launch and tow me south past the rain showers in to sunshine and potential lift. We took off and flew through one small rain shaft 1-2 NM south of field. I released from tow about 8NM south of the airport in good lift and climbed from 8000 to 8700 quickly. The lift died and I hunted around for lift with no results. I then decided to return to the airport for landing.

Approximately 3-4 NM from the airport I suffered moderate to severe sink and radioed my friends still at the airport that I planned to land out in a field SW of the airport and instructed them to bring my truck and trailer for disassembly. I set up for landing in the field just south of highway 132 and went through my pre-landing checklist and configuration. At approximately 200 feet AGL I experienced a strong updraft that lasted 15-30 seconds. Even with full spoilers (drag devices) it was obvious I would not be able to land in this field due to my proximity to the fence at the west (upwind) end. So I stowed the spoilers, pitched up slightly and focused on the field just north of the highway.

I had to clear the telephone/power wires on the north side of the highway which I did with sufficient speed and altitude. I then focused on landing in the field. Along the north edge of the field lay a line of sprinkler pipes and wheels so I decided to angle left and land to the northwest. At approximately 5 feet it looked like I would still hit the sprinkler pipes. Right at touchdown, speed brake lever full back, I dug the left wingtip in so as to cause a ground loop. This caused a violent reaction driving the nose into the field and flexed/broke the fuselage, tailboom, and canopy.

I exited the glider with bruised ankles and feet but no other significant injuries. Landing occurred at approximately 1355 local time. Glider suffered significant damage.
