On the morning of June 1st I departed the RDM seaplane base at approximately 1015am and a standard Prince of Whales Island bear viewing flight with the intended destination of Cholmondeley Sound. about 15 min later after a normal flight across Clarence Straights we entered the sound at about 1200-1500 feet, visibility in the area was approximately 8-10 miles with intermittent light rain. I made 1 intermediate stop landing at the entrance to sunny cove after spotting a whale. After watching the whale for about 10 minutes I departed to the east, turned back to the west and entered the West Arm of Cholmondeley Sound flying to the head of the West Arm looking for any bears that may have been on the beach at low tide. Having no luck I turned back to the east with a landing destination of Dora Bay, an area I am very familiar with. I elected to land between Divide Head and Dora Bay near my family cabin where I have landed numerous times. With the current wind conditions I elected to land straight in in a southerly direction, prevailing winds were out of the south at 8-12 knots, mostly of the nose but slightly left of the nose. Coming down the channel on final approach I encountered some very light turbulence. I made a very normal touchdown, within 1-2 seconds after touchdown I felt a strong wind on the tail from the left, the wind slightly lifted the tail of the plane and pushed the right front of the float further into the water than normal. I immediately pulled back and left on the controls with virtually no response from the A/C. At this point the right float continued to "suck" down (and at about that time I believe the float struts on the right side collapsed) and the right wing impacted the water. The plane spun approximately 90-120 degrees to the right, as the right float and wing released from the water the plane overcorrected to the left and the left wing impacted the water and the plane came to a sudden stop. After the plane stopped I immediately assessed the situation and started to evacuate the plane. The pilots left front door was jammed closed, after a couple shoulders and the two kicks the door opened, as I climbed out on the left float the passengers were already donning there life vests, I instructed them not to inflate them until they were clear of the cabin. Once everyone was clear of the cabin and on the left float I verified they had there vests secured properly and pulled the lanyards to inflate the vests. Within 3-4 minutes a woman from a nearby cabin showed up in her skiff and all 6 passengers loaded up and were taken to the beach. I stayed on the plane as it drifted to the shore, once within about 20 feet of the beach I jumped in and pulled the plane up on the beach and secured it. From there I hiked over to the passengers, got them in the cabin and was able to get a text message out to let the company know our situation. The women from the skiff went to another nearby cabin at my request and the contacted the coast guard via radio to inform them. We were in the cabin for approximately 90 minutes before the first airplane arrived and took 4 of the passengers back to Ketchikan to the Taquan Air dock where they were met by the local Fire Department and EMT's. The second aircraft arrived about 30 minutes later and transported myself and the remaining 2 passengers back to Ketchikan at the Taquan air dock. 4 of the 6 passengers refused medical treatment and were released at the scene, 2 passengers were taken to the Ketchikan Medical center and treated for minor injuries. I was uninjured, but was briefly examined at the dock by the Fire Department EMT's and released.
