Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Propeller chipped and scratched on both tips. Firewall and floor crumple damage.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On May 25, 2018 at approximately 2300 hours (EDT) I was the pilot in command (PIC) of a Cessna Skyhawk 172S (Serial #172S8135) with a registration number of N789EP. I departed Cape May County Airport (KWWD) at approximately 2140 hours with a destination of Carroll County Regional Airport (KDMW). The flight from KWWD to KDMW was conducted at 6,500' AGL, the air was smooth, and no natural or mechanical issues occurred. Prior to departure I received a weather briefing utilizing the ForeFlight briefing function.

Upon arrival at Carroll County Regional Airport (KDMW) I selected runway sixteen (16) a 5100'x100' asphalt runway in good condition. I activated the airport lighting upon my arrival and the lights were on high intensity. There were no other aircraft observed in the area or in the pattern at the time of my arrival or during the incident. At approximately 10 nautical miles from the airport I listened to the AWOS on channel 121.25. The winds were 210 degrees at 9 knots (no gusts) with a visibility of 10 statute miles and scattered clouds at 10,000 feet. No unforeseen weather phenomena occurred during the flight or incident.

As I neared KDMW I entered the pattern on a 45-degree angle for a left pattern at a pattern altitude of 1,800' AGL. I flew the downwind leg until the plane was abeam the runway number for runway sixteen (16), at which time I reduced the throttle to approximately 1,500-1,700 RPMs. I began my controlled descent adding 10 degrees of flaps, and then turned for the base leg. I flew the base leg adding 20 degrees of flaps at an approximate speed of 80 knots. I continued to descend in a controlled manner and turned toward the runway for final approach. After the turn I added full flaps and flew at an approximate speed of 70 knots. The plane continued to descend at a controlled rate as I neared the end of runway sixteen (16). As the plane approached the end of the runway I felt there was sufficient altitude to reduce power for landing, at which time I reduced the throttle to idle. As the plane passed over the vicinity of the runway numbers I perceived it to rapidly descend to the runway. As the plane made a rapid descent it made a hard-flat landing onto the runway surface and it bounced back into the air. I immediately engaged full throttle and retracted the first notch of flaps in preparation for a go-around. The landing was hard, but I did not perceive any indications that damage had occurred at that time.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This incident was a result of a flat landing. Other than additional training for the pilot there are no recommendations.

Continuation from page 9

The plane began to climb and I retracted the remaining flaps as the airspeed and altitude increased. I flew the plane turning crosswind at approximately 1,300' AGL, then downwind at pattern altitude of 1,800' AGL, and then reduced power, added flaps, and turned base. I initiated a controlled descent and turned final controlling the plane until it was safely on the runway. I then taxied the plane to the Dream Aviation corporate hangar. I did a cursory check of the plane and I did not take notice of the plane's propeller or any other damage at the time of storage. I returned the plane to the Dream Aviation hangar and left the premises.

There was a non-pilot passenger, Kenneth Lyle Tilton III, seated in the right seat at the time of the incident. He did not sustain any injuries as a result of the hard landing. The cabin was sterile at the time of the incident, meaning there was no noise, talking, or interference with the controls.

Three days later I received a call from Dream Aviation advising that damage was observed to the plane's structure in the area of the floor and firewall, and to the tips of the plane's propeller. I was the last person to fly the plane and based on the hard landing that occurred the damage must have occurred at that time. Once I was notified of the damage I responded to Dream Aviation to observe the damage, and to speak with the owner Jeremy Etzkorn about the process of reporting and taking responsibility for the damage.

I have 56.5 hours of total flight during my time as a pilot. All 56.5 hours of my flight time have taken place in a Cessna Skyhawk 172S. In the last 90 days I have flown 8.4 hours. In the last twelve months I have flown 32 hours. My last check ride was for my private pilot certificate with a DPE, and the check-ride occurred on February 12, 2018. I completed the online DC Special Flight Rules Area course on January 17, 2017, the online Sporty's Complete Private Pilot Training Course on July 12, 2017, and the online AOPA Air Safety Institute Runway Safety course on December 2, 2017. My Private Pilot Certificate number is [REDACTED] and my third-class medical certificate was issued on April 4, 2017.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
