NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs in effect at the time of the accident/incident: 						

This is a description of the incident which occurred 14:30 hours local time on the water at W-36 Seaplane Base in Renton, WA.

I was the pilot in command and only person on board. The plane (N352AM) is an Aviat Husky A-1B on floats. The total time on the aircraft is over 900 hours and for most of those hours I was the pilot in command. I left the dock on a flight to Victoria, British Columbia with full full and fishing gear as well as luggage for four days of fishing. ATIS was reporting winds at 10 knots. As I started the slide, the tower announced that some gust up to 20 knots could be expected. My rudders were up and during the run, I felt a shift in wind direction and as I started lift off at 40 knots with 10% of flaps, a strong gust hit from a cross wind angle and lifted my left wing. The right wing dipped into the water and the plane lost lift and hit the water as a boat wake contacted the right float. The impact damaged the float connecting rod. I pulled the power and shut the engine off. The plane settled upright on both floats but the left float began to float free and the plane began to list to the right as the water started to fill the damaged right float. A private boat came along side and I got out of the plane and tossed them a rope. After several tries they tied off and began towing to shore. Mercer Island Patrol came alongside and took over the tow. I was unhurt and standing on the right float which was still above water. It sank below the water and at about two feet below the surface I was taken onboard the fire department skiff that came out from the airport. Although it was bouncing from side to side, I believe the plane did not strike the water except the right wing dipping down about 12 inches.

It is hard to be absolutely clear about the incident but from my memory and from my review of the damage later, it seems that this report is as accurate as I can make it. I was secured by a five point harness so there was no hard impact to my head or body. I have flown 3,000 hours without an incident. My pride and my plane sustained the damage.

wing tip slight damage tail bent -

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The gust of wind came from the cross wind & lifted the wing just as the plane was lifting off of the water. It is hard to say how I could have prevented the accident. I have thought long & hard about this.
