Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right main landing gear sheared off. Right wing strut bent and pulled out at the fuselage attachment. Right wing main and rear spar attachment damaged, wing skin at the fuselage bent, outer two foot of leading edge bent. Right elevator tip bent. Prop strike with both tips damaged. Engine cowling bent. Both doors hinges broken. Buckling of the right front floor panels. Gear tunnels damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

On 10 June 2018, at about 0915 local time, I completed a per-flight of N170W (Cessna 170B) at E95. I started the engine and monitored the ASOS for weather information and confirmed that winds were favoring runway 28. I taxied to the run-up area for 28 and began the run up procedures. All checks were good and I announced my intention to takeoff from runway 28 and remain in the pattern. I lined up on 28 and checked the wind sock a verified a left quartering head wind of about 3 to 5 knots. I took off from runway 28 and climbed to pattern altitude. I made a radio call announcing my entry onto left downwind for runway 28. I set up N170W into a landing configuration abeam mid-field and started my decent abeam the numbers for runway 28. I made a radio call announcing my entry onto left base then my turn to final. I touched the main wheels at about the 500ft mark. As the mains touched down the aircraft started to veer to the left, I corrected with right rudder and nose quickly turned to the right. I added left rudder to correct and I then added power to execute a go around when the nose veered to the left again and the aircraft started to hop due to the mains sliding sideways. On the third hop I heard a loud thud sound and the tail came around to the right. The right wing dropped and the plane came to rest on the right side with with the engine stopped and fuel leaking from the right tank. I turned off all power and exited the aircraft. As I exited the aircraft I noticed the windsock indicated a 3 to 5 knot left quartering tail wind for runway 28. There was no damage to anything on the ground other than N170W itself and no injuries to bi-standers or myself as a result of the accident.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Conduct more training with a qualified instructor in various weather (wind) conditions to better understand the effects on a tail wheeled aircraft.
