Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The nose gear collapsed causing the plane to land on the nose undercarriage. The prop was heavily damaged. The engine came to a sudden stop. Motor mounts were twisted. Fire wall was damaged. The belly pan was damaged where it came into contact with the asphalt.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Sunday, June 10, 2018 at 3:20 PM I, Joe Scallon left K0F3 on a flight to KC17 with passengers Amy Geis and Vince Geis. I was flying Piper Dakota 4295T. I got weather information from KCID because KC17 does not have weather on the field. Wind was from 080 at 11. 10-mile visibility with clouds broken at 2,400. With this information I decided to land on runway 17. Given the wind at 90 degrees from the runway and a cross wind, I did not want to fight the change in wind that could be caused by the large building close to the runway of 35.

On my first attempt to land I touched down nose first and "porposed". Deciding it best to go around I did so. On the second attempt as I touched down the nose fell to the ground. I had no control of the nose wheel and the prop had stopped. I used the brakes to steer the plane to the grass on the east side of the runway. That is where the plane came to a stop.

There were no injuries and there was no sign of fire. I asked the passengers to exit the plane while I shut the fuel and electrical systems off.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I was concentrating too much on keeping the plane centered on the runway given the crosswind and the narrow asphalt portion of the runway. I needed to make sure that my airspeed was slower and my attitude was better than it was on the original landing.

Given the 90 degree crosswind and the condition of the runway I should have used the option of landing at KCID. KCID would have allowed me to land without the crosswind and a wider runway.
