Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The aircraft was destroyed. Right wingtip detached approximately 3 feet from the tip. Propeller bent. Engine mount deformed. Cowling destroyed. Aft fuselage bent behind cabin area.

No other property damage occurred as the aircraft impacted trees in a small forested area bordering a residential property and fell into high brush on the margin of that property without coming close to any structure.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Subject: Event description pertaining to Aircraft Accident involving N5787L on May 24, 2018.

I taxied the aircraft to the run-up area for runway 06 at Spruce Creek Airport (7FL6) at approximately 4:00 PM and performed a run-up and mag check. After takeoff I made a left downwind departure to the West of the airport remaining at approximately 1000 feet to be clear of the Daytona Beach Airport (KDAB) Class Charlie airspace. I continued to the West Southwest about two miles when the engine quit. While searching for an off airport landing spot I made a right turn back towards 7FL6 while switching tanks and checking the mixture rich. The engine re-started briefly and then quit again. I returned the fuel selector to the original tank. The engine did not re-start. The terrain was heavy vegetation of unknown height bordered on most sides by trees and did not appear suitable for an off-airport landing. I observed a possible landing area, but on further observation it was below high tension power lines and I abandoned that possible choice as unfit for a landing attempt. I saw a clear area ahead to the South and proceeded in that direction. As the aircraft continued to descend I saw that my glide path would not clear the trees between my position and the possible landing area. By this point the altitude was very low and there was no other option than maintaining the speed, avoiding the stall, and flying under control into the trees. The aircraft fell in a flat attitude into the brush below the trees.

After the crash I turned off the mags and master switch and exited the aircraft by kicking out a rear window.

Emergency medical team arrived immediately having been notified by local residents who observed the aircraft descending. A fireman also arrived at the same time.

The intended destination had been a return to 7FL6.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I should have made a positive determination of fuel on board prior to takeoff.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
