Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Prop bent. Unknown amount of damage forward to firewall. Wings bent, nose gear departed upon touchdown in field. Main gear pushed up through wing/flaps. Fuselage/windows/tail intact. No damage to persons/property on ground.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Sunday 6/17/18 departed KJWN for 3M0 in VFR conditions with approximately 65 gal fuel, 2 passengers. One passenger in co-pilot seat, the other in rear facing seat behind me. Upon reaching the airstrip, overflew from east to west and circled back for the left downwind RW 24. Banked to the left for base to final more than usual, due to the topography, and I felt the engine sputter a bit as I came wings level. I was distracted by this, continued on final as I was lined up with the airstrip. I attribute the engine sputtering to the bank angle, not any particular mechanical issue.

As I got lower on final, one of the passengers stated that there were 4 people on the runway. I only recall seeing two, who at that point were running left to right across the airstrip. I was further distracted by this, thinking there were additional persons on the runway that I was not seeing. As I scanned further down the runway, there was a line of what looked like snow geese walking across the runway a few hundred feet further downfield.

During this time, I believe I neglected to lower the landing gear. During the attempted landing, I believe the prop may have contacted the turf.

At this point, I pushed the throttle, prop, mixture full forward and gained elevation. I turned to the right/North, flew over a line of trees. I had seen from the flyover that the river was to the left.

The aircraft did not gain speed as I felt was normal for this aircraft. I was not looking at the gauges at this point, but looking out and scanning the terrain. Just over the tree line was a large cleared hay field. In the face of all of this, with aircraft performance that was not what I felt was "normal", rather than try to continue flying further over rising, and largely wooded terrain, I put the aircraft down in the cleared hay field. All three of us exited the aircraft under our own power and the farmer who happened to see/hear me, met us and kindly transported us to the airstrip/resort which was no more than a mile away.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Early, immediate go-around. Would recommend flying in with an experienced local CFI.
