Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wing leading edge, wing struts dented, small dent on right wing leading edge and left landing gear. No engine or prop damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Normal preflight weather and airfield information was reviewed along with preflight and fuel service. At approximately 1330 Alaska time on 14 Jun, I departed Anderson Lake, Rwy 26, to visit my mechanic at Willow to assess the airplane for a future float installation. After the stop at Willow, I took off and proceeded to the Knik area for takeoff and landing practice. All total, to include Willow, I conducted 11 landings and subsequent takeoffs in the 2.5 hrs of operating time prior to landing back at Anderson. Upon arrival at Anderson Lake, at approx 1755 Alaska time, I overflew the field. Altitude winds appeared to favor Runway 08, however the windsock slightly favored Runway 26 with light winds (unknown at the time, was the windsock had a hole in it and was being affected by the trees nearby). On short final I experienced moderate turbulence and made multiple power adjustments with constant control input to maintain runway alignment and glide path. Touchdown was a normal wheel landing with flaps, after lowering the tailwheel, and slowing to an estimated 20-25 mph, the aircraft began to swerve right. I put in full aileron to the left, applied full left rudder and applied maximum left braking which only slowed the right swerve slightly. The aircraft impacted a garden post 30' right of the runway and come to rest in the trees 50' right of the runway, with the fuselage stopping approximately 60' from the runway. After exiting the aircraft, at one point I observed the windsock favoring Runway 26 and periodically appeared to be limp or swirling in the wind shadow behind the trees, while a private flag midfield favored Runway 08 moderately or would go limp at times. After the incident, I was told the windsock had a hole in it and it wasn't uncommon to provide false information in the wake of the taller trees to the south. The windsock was replaced with a new one a few days after the incident.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Insure airfield wind information devices are maintained in a serviceable manner.

Relocate wind devices so they aren't affected by local terrain or area vegetation and growth.

Add a note to the FAA "Chart Supplement Alaska" airport remarks section for OAK1, "Windsock information unreliable due to trees in the vicinity".

If one doesn't exist, consider publishing a recommended guide for airport design, clear zones and other airport elements to provide private small general aviation communities a template for airport safety and functionality.
