Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

BOTH MAIN LANDING GEAR COLLAPSED. PROPELLER STRIKE. WING(S) DAMAGE.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Prior to takeoff for a local flight, I called ATC for a wind check. ATIS reported the winds to be 340@12 Gusting 17. Tower responded to the wind check request with winds to be 350@8knots and I was cleared for takeoff. I took off on runway 05 and performed a local flight. Upon return to KCRE, I entered the right downwind for runway 05 as instructed by ATC. As I turned final I called for a wind check and ATC reported the winds to be 350@8knots. I made a stabilized approach to a smooth stall (3-point) landing. When the tail wheel contacted the runway the aircraft began to shudder violently. From my perspective, the shuddering was caused by the tail wheel, which resulting in the nose of the aircraft to begin to veer to the left. I raised the tail to lift the tail wheel off the runway and the shuddering stopped. I also corrected the left turning moment to a straight centerline directional heading. As the airspeed decreased and the elevator authority reduced, the tail wheel returned to touch down on the runway and the aircraft again began to shudder. The aircraft began to veer to the left and I corrected with full right rudder and pushed full left stick to keep the left wing down. At around 20 miles per hour the aircraft heading reached past 10-15 degrees off runway centerline heading and the right main landing gear collapsed resulting in a propeller strike to the runway/ground. Subsequently the left main landing gear collapsed and the aircraft came to a rest on its belly in a somewhat level attitude, on the left side of runway 05. The aircraft was partially on the runway and partially on the paved runway skirt facing about 320 degrees. Aircraft power and fuel were shut off and all occupants exited the airplane without assistance. I called KCRE ATC and gave them my personal details and aircraft information and contacted company management to notify FAA forthwith. Numerous photographs and video of the scene were taken by company personnel for FAA submission. .
