Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Bird strike to base of vertical stabilizer leading edge. Leading edge depressed with horizontal tear in the skin. Possible damage to underlying ribs.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 7/23/18 at 15:30 CDT, operating under Part 91, we had a bird strike on approach to landing at KTUL. VFR conditions prevailed and winds were 020 at 8-10 kts. We were 8-10 miles out, 220 kts and 3500 AGL. I saw an easterly bound bird for about a second, passing right above the cockpit window. I heard a thump and felt the impact, thinking it hit right above our head. The co-pilot also observed an object right before impact. After landing, we saw that the bird did not hit above our head, the bird struck the lower front section of the vertical stabilizer. Damage was a dent approximately 1 foot long and 5 inch wide. The aluminum was punctured leaving a hole 5X3 in in diameter.
