

Dear Sir

I seen the plane 6167L on 6-30-2018 do a hard landing on 32. It bounced real hard, when he tried to get it up the plane tilted to the right real steep then back to the left, when he got it up he went around towards 32. He called on the airport phone and asked me how to land at this airport, I think he thought we had a tower. I told him this was not a controlled airport he said ok. He never asked what the wind was doing. That was the last time I heard from him, he never called back on radio. About 20 min later I went out to the fuel pumps, that is when I saw the tail of the plane sticking up over the bank on the far side of the runway.
