NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed KCNY at about 0900 local. Direct flight to UT75 (Mineral Canyon). I was flying with two other aircraft. The preceding two aircraft landed at UT 75 and reported no wind, and good runway surface. No weather was a factor, and weather had been checked before our departure at KCNY, using WingX Pro 7 for TAF and METARS, National Weather Service and local AWOS/ATIS.

UT75 is located in a river valley, at the bottom of a deep canyon. I made a downwind leg for runway 14 on top of the canyon wall to the East to get a good view of the runway, clearing for traffic. The Canyon walls are very high, so I made an extended downwind leg, turned base and began my descent. I turned on a long final, continued my descent and once again looked for traffic on the runway. There is higher terrain just North of the approach end to 14, so I stayed a little high and consequently had a little more speed than normal at touchdown. I landed in a two point attitude because of my speed and allowed the tail to settle. When the tailwheel touched the ground, I planted the stick in my lap and reached for the brake pedals. I wanted to get stopped in the first half of the runway, because from the air I saw that the last third of the runway was a different color and I wasn't sure how smooth it would be. So, I got on the brakes a little harder than normal. I felt the tail come off the ground, but I had experienced that before and normally it wasn't a big deal. However, this time I had a bit of momentum in the tail coming up and instead of the tail raise stopping it kept increasing. I let off of the brakes and confirmed I had the stick planted in my lap, but the nose dipped and I flipped straight forward and the plane ended up on it's back, pretty much dead center of the runway, pointing back at the approach end and just a few degrees off centerline.

I turned off all of the switches and fuel, opened the pilot side door, put my right hand on the top of the aircraft and unbuckled my seat belt with my left hand. I rolled over and egressed the aircraft.

There were a lot of aircraft flying in the general area that day and I was concerned that another aircraft could land and not see the wreck, so I flagged down some ATVs in the area. One had a winch, so we safely flipped the plane back over, rolled it off the runway, and secured it with tiedowns. All of this Occurred around 1000 Local MTN time 05/19/2018

The day before I had landed on another unimproved strip, but had about 120 pounds of camping gear in the back. The added weight in the back allowed me to brake much harder than I had before. I think this set up a situation of false braking confidence for the following day without the weight in the back.

Bottom line...it was Pilot Error in the amount of braking power used. I had plenty of runway (1000'+ remaining). I was late to recognize the momentum built in the tail, and by the time I did recognize it, I didn't have time to correct it.

Lessons learned...keep the tail planted on the ground, use all available runway if necessary.
