NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Conventional (Tailwheel) aircraft Super Cub N104CC was involved in an incident on August 9, 2018. The sortie was planned as a continuation training event for the solo pilot, George Warton, [REDACTED] CFII, exp 12/19. Following seven landing patterns of varying flap settings and type (3 point or wheeled) the 8th approach and landing was to a wheeled touch down with the flaps retracted, full stop. Winds according to the visible wind socks on the airfield indicated a right quartering headwind of approximately 5-10 knots, which differed from the information provided by the ASOS that was checked on each pattern to compare with the wind socks. Also noted was that turbulence and wind changes gradually moved down from 7200 MSL to approximately 6500 MSL (150' AGL) during the patterns. The intent was to full stop on the eighth landing to avoid dealing with gusty winds when they descended to the surface.

At approximately 1125 MDT at Raton Municipal Airport, NM (KRTN) on runway 25, during a planned full stop landing at approximately 30 mph indicated airspeed in a 3-point aircraft attitude following an uneventful right to left wheeled touchdown for the right crosswind, the aircraft was exposed to a strong wind gust/sheer from the left side resulting in the aircraft rotating on three wheels to the left (ground loop) off the runway despite full right rudder and some right brake. The problem was further exacerbated by the soft/muddy turf just off the runway surface with the main tires sinking to the hubs as evidenced by grass tufts in the wheel rim observed during postflight. The aircraft nosed down during the loop and the prop struck the ground along with the right-wing tip, right aileron, and right elevator. There were no known injuries to the pilot who was the sole occupant. The pilot egressed the aircraft and together with ground crews righted the aircraft and moved it to the aircraft hangar.
