Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

- Composite Prop
- Ding on Left Wing Tip
- Belly composite ding and gouges
- Top right wing ding
- Both main wheels separated composite anchorage

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Fueled aircraft.

Received information India from ATIS

From C1 location called ground 121.9 request taxi to active runway.

Given clearance to taxi to runway 27

Taxied to hold short at runway 27

Went threw pre-takeoff checks.

Called tower for take off clearance 118.3

Given clearance for take off 27

Taxied onto runway 27 and lined up for take off.

advanced throttle started roll.

Tracked straight increasing power.

Control stick forward to raise tail wheel.

At Rotation speed aircraft left runway straight heading than aircraft moved left parallel with runway.

Immediately tried to correct but aircraft stayed left of runway.

Because aircraft wings are designed so low to pavement I decided to abort takeoff.

I felt that if the wing were to contact the ground in a bank it would be a bad idea.

I pulled power and the aircraft settled quickly and hard on ground next to runway at heading approximately heading 250 degrees.

Aircraft bounced once then stayed on the ground.

Aircraft at that time lost both main wheels and slid to a stop.

After losing wheels prop contacted ground (prop being made of composite) they sheared off.

Because there was no evidence of fire I secured Aircraft and got out.

The wheels and prop blades were found approximately 20-25 yards directly behind Aircraft.

I feel the only way this could have occurred was for a gust to have pushed my aircraft left at the most vulnerable moment in the sequence of take off.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

If I had known of possible winds gusts I would have held aircraft 10% past rotate speed before rotating.
