NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

We were flying a load of skydivers in VMC conditions up to our first altitude at 6500 MSL. I had been keeping an eye on buildup to the south and southwest moving slowly east, but by the time we got to our jump altitude still in VMC, nevertheless there was some light precipitation at altitude and I was concerned about potential convergence of buildups, and informed the passengers that it would be best to land and wait for the buildup to pass.

I quickly descended to the pattern in light rain. I fully configured the aircraft for landing, but as I crossed the threshold, at approx. 100' AGL, the precipitation increased suddenly. I elected to initiate a go-around. I applied full power, raised the nose to establish climb and raised the flaps to 20 degrees. The aircraft responded normally, but there was no corresponding increase in airspeed or altitude or rate of climb. At this point, I identified a potential downdraft or microburst. I decided the safest option was to land the aircraft with the remaining runway, while still in positive control. On touch down, I applied full braking. However, we ended up overshooting and incurred into the cornfield. The engine stopped once we were in the corn, and the airplane came to a stop.

I checked to make sure all the passengers were safe, then I secured the aircraft and we deplaned.
