Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Typical damage to a aircraft that has preformed a slow motion nose over accident: Power off prop strike, top of wings from landing upside down in the gravel. Wings spars slightly bent. top of vertical stabilizer. windshield.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

On Thursday August 9th 2018 I left airport 02AK in Willow AK, at around 3:00 pm. The purpose of the flight was for scouting for a camping sight for a possible hunting trip in the area later in the month when moose season opened. Obtained a weather briefing from the internet from the Alaska Aviation Weather Unit and FAA weather cams. Also from TV aviation weather. Intended destination was the Nalchina River drainage. This is a place that I've taken the plane before in years past. The river drainage is about 3 miles wide and flat between the mountains that they flow out off. full off sand, and gravel bars suitable to land a plane such as my Maule type aircraft. Circled the area for a while a picked out my landing spot, and did a fairly normal approach with a downwind, base and final. I came in on the final landing faze with a little to much speed approx. 5 -8 knots fast. Did a 3 point landing and bounced and on the second impact the right landing gear hit a rock which threw my center of gravity forward. The tires did a nice job off slowing me down on the sand and gravel which aided in helping the center of gravity go over the top. Basically doing almost a slow motion nose over. Once I went over onto my back I turned the ignition, master switch, and fuel off. Opened up the door and crawled out. My seatbelt did it's job and I have not even a scratch on me. Pulled a hand held radio out of my survival vest and made contact with a unknown passing plane going past in the area. I asked that he call the authorities and relay a message that i was not injured and that I would find a ride home. A good samaritan super cub pilot stop by and gave me a ride home.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

When flying a tail dragger type airplanes the pilot should always work to maintain the highest level of proficiency possible in landing these aircraft. I think during the flying season i will spend more time practicing my landings on a more improved runway and trans-issuing in to a more difficult runway enviroment. Set up a training schedule for more practice time at landing, take off and ground operations as this seems to be my concern with a tail dragger. Spend more time training with instructors who are hi time tail dragger pilots and have more experience than me.
