Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft had significant damage to wings, landing gear and fuselage. No property damage other than a fence row.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Please see attached

- Arrived at Jack Edwards airport
- Began Preflight inspection on the aircraft I was to fly that day (N88287) i.a.w. POH checklist
- Did a fuel drain check, oil quantity check and general exterior condition check i.a.w. POH
- Started the engine and verified satisfactory engine indications at engine start up
- Took off from Jack Edwards Airport and flew 88287 to the banner field and conducted a check for proper engine control positions
- Made my approach to the pick-up point and picked up banner.
- Ground crew suspected the banner had caught on the tailwheel so I circled the banner field so they could get a better look. They said they believed it was caught on or near the tailwheel.
- I circled and made another pass over the banner field to pull the hook release handle. I was told the hook fell to the ground but not the banner.
- I circled over the banner field while climbing to remain at a safe altitude
- I began to turn toward Jack Edwards airport, as that was where I would make an emergency landing.
- As I did not know for certain specifically how the banner was still attached, while still over the banner field I attempted to free the banner from the plane by reducing power to idle and making a descent similar to an approach normally made to drop a banner. I decided an attempt to drop it before departing to Jack Edwards was appropriate as it would be conducted in a safe, controlled environment with experienced ground crew within a safe distance.
- The banner didn't separate from the plane so I leveled off
- At the same time as leveling the plane, I brought the throttle up to full power. It sounded like the engine sputtered once or twice but with no power increase. I pulled it back, waited a brief moment, then reapplied full throttle slowly. There was no response from the engine. The mixture control was already in the full rich position, which I confirmed visually and instinctively put my hand on it to verify. I also confirmed the primer knob was in the closed and locked position.
- I manipulated the throttle, at a progressive and controlled rate, two more times. Still there was no response from the engine.
- At this point a forced landing was apparent to me, so I made a radio call to the ground crew and for the brief time I was still airborne, my priority and focus was to remain clear of people, buildings and personal property.
- While it is customary to pull advertising banners with some flaps extended, in the last few seconds of flight before the crash, I chose to extend full flaps to assure a landing within the banner field and protect the lives and properties of the neighboring areas.
- I maneuvered slightly around a large tree and then slightly to the right to try and avoid the power lines and set the plane down in a small clearing on the southwest corner of the banner field.
- A moment before impact I felt the banner cause additional drag, presumably as it touched the ground, then the plane hit the ground too.
- The left wing began to leak fuel at a rapid rate, so my immediate thought was to pull the mixture lever to lean cut-off, but it only moved out partially then jammed.
- I believe I then instinctively shut off the two magneto switches and the master as well, before evacuating the aircraft through the right door window, which had broken. (After the fire services had secured the aircraft, I visually confirmed I had indeed turned those switches off).

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

Pilot was told to follow procedure and head to KJKA to land on the asphalt runway, this allows the banner that he caught in the tail wheel to slide instead of sticking into the ground like it does on the grass field. Following normal procedure would have prevented this occurrence and has been proven several times over the past 20 years.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)**Was there Mechanical Malfunction/Failure?** ☐ Yes ☒ No*(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)*

As per inspection and observation none seemed to have occurred. Pilot did report trouble with engine responsiveness.
