8/18/2018

08:00 - Arrived at El Aero Hangar, Preflight, WX, etc. Helicopter was fueled the day previous.

08:35 - Ferry from KEKO to KBAM, full fuel.

10:22 - First Survey with 2 PAX, 2:28.

13:12 - Second Survey with 2 PAX. 0:34. Added 45 gallons of fuel for a total of 70.

Weight & Balance numbers: (Empty weight 1896 lbs)

Fuel - 490

PIC - 240

Pax1- 230

Pax2- 175

Cargo- 42 (PIC personal gear only)

Approx 30 minutes into the survey we were flying in Sheep Creek Canyon in a steady climb out at 30KT IAS and approx 50' AGL (PAX advised 20' in their opinion) at 85% TQ. Winds were noted in previous canyon but this one was calm at the moment.

I felt a hard vibration in cyclic & collective similar to VRS and noted IAS had dropped to zero and it felt like we were being pushed down.

Jeremy L. (Pax#2) noted later that it felt like we were stopped in mid-flight.

At this same time the TQ indicator jumped to 120%+ with no control input from PIC. I applied right cyclic, lowered collective to attempt to regain power and right pedal to reduce TQ and turn heli downslope (hopefully into the wind that was now on our tail, or so was assumed from gage readings). There was some good effect of the maneuvers but not enough to avoid impact. When I realized we would hit I nosed the aircraft down to match the slope (controls were vibrating and sluggish at best), pulled full collective just before impact.

Elapsed time for all above events approx 8 seconds including when we were still in a controlled climb. Elapsed time from first note of something wrong, approx 5 seconds.

Helicopter impacted the ground, rear of skids hit first but close to level with the slope. I felt the blades hit the ground several times and spin the helicopter around. It had rolled onto the right side before the main rotor blades impacted.

Current orientation of aircraft is about 180 degrees from direction of impact.

Engine was still running at full throttle. I couldn't see due to dust and dirt from impact and open doorway.

I felt for the collective and shut the engine down, then turned off the fuel valve switch.

At some point during the the front seat PAX fell on me as he released his seat belt and he quickly exited. I believe that was before I got the engine shut off but not 100% sure. Some moments later I heard Jeremy yell 'FIRE' several times. I could see now and removed the fire extinguisher from its mount in case a crew member was on fire. I removed my helmet (it seemed to be hung up on something and was holding me in) and exited the aircraft.

Once out of the heli I noted both PAX to be safe but the heli and surrounding hillside were on fire. It was too hot to retrieve any gear from the aircraft. The three of us climbed up the mountain to a rock area to escape the fire which was spreading extremely fast due to the moderate winds that were now blowing in the area. Wind speeds 10-30 KT, changing direction every minute or so.
